Get > Set >> Go >>> For Solid Edge

Introduction: If you often work with a specific set of files and want to open the last saved set quickly, Get-Set-Go for Solid Edge will come in handy and make the process easy and streamlined.

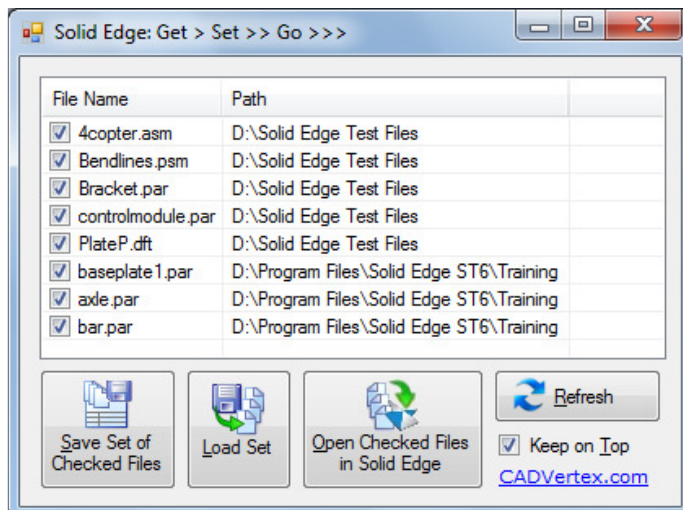

Get-Set-Go can be launched from a ribbon bar button or from the Quick Access bar.

If files are open in Solid Edge, they are all listed in the dialog. You can then save this set of files to a .SET file.

The same set of files can be later opened from the **Load Set** button.

This lists the files in the dialog.

You can further check-uncheck files from this set and open only the checked files in Solid Edge using the **Open Checked Files** button.

While Get-Set-Go is still running, files can be manually opened or closed in Solid Edge. Click the **Refresh** button to reflect this new set of open files in the dialog.

The new set can then be again saved as a different .SET file using the **Save Set** button.

“Get Set Go for Solid Edge is 100% FREE and can be downloaded from the link on next page.”
